

Global administrator settings

| Name | Description | Default Value |
|------------------------------|--|---------------|
| Can anyone access eServ | When selected, users can access eServ. If not selected, NO ONE can access eServ. | true |
| Session time out | This value controls the session time out. The value is represented in minutes. If the user does not request a page from your server within this time, the session will time out and require the user to login again. | 20 Minutes |
| Login page name | This setting controls the start login page when someone initially accesses eServ. This page must exist in your Website or an error will occur. | HALogin.asp |
| eServ logo file name | This value specifies the logo file name to display in the upper left corner of eServ pages. This file must exist in your Website to display properly. | Logo.gif |
| Dealer primary location code | This setting contains the primary store location code. If not set, the default is one (1). Do not enter zero one (01) for the location code when your default location is one(1). | 1 |

Login page settings

| Name | Description | Default Value |
|--------------------------------------|--|---|
| Login page header | This value contains the page header shown in the upper right section of the page. | Login |
| Login page title | This value determines the page title shown in the upper right part of the login page. | eServ Login |
| Prompt for user ID entry | This value specifies the prompt to display for the User ID. | Enter Your User ID: |
| Prompt for password entry | This value specifies the prompt to use when asking the user for a password entry. | Enter Your Password: |
| Prompt for save login settings | This value specifies the prompt to use when asking the user if they want to save their login settings. | Save Settings: |
| General login information line 1 | General purpose instruction line for login. This line displays above the login and password boxes. | Please enter your User ID and Password to Login. |
| General login information line 2 | This line of general login information appears below the login boxes and is primarily for contact information if the user has a problem. | Please contact customer service if you need assistance. |
| Text for link back to your home page | This value contains the text you want to display that will be hyperlinked back to your home page URL. Do not enter any text here unless you also enter a home page URL. | |
| Home page URL | This setting contains the complete URL to your home page. This setting must begin with http:// and include the complete path to your home page. Be sure to test this link before allowing users to access your site. | |
| Login button text | This value specifies the text shown on the login button. | Login |
| Show the lost password link | When selected, the lost password link will appear on the login page. | false |
| Lost password link text | This value contains the text to display for the lost password link. | Lost password? Click Here. |
| Lost password page name | This value contains the lost password page name. This page must exist in your Website. | HALostPwd.asp |

Lost password page options

| Name | Description | Default Value |
|----------------------------------|--|---------------------------|
| Lost password page header | This value contains the page header shown in the upper right section of the page. | Lost Password |
| Lost password page title | This value contains the page title shown in the center middle of the page. | Recover Lost Password |
| Lost password input prompt | This value contains the input prompt for the user to enter their email address. | Enter your email address: |
| Lost password submit button text | This value contains the text appearing on the lost password page submit button. | Send Password |
| Lost password back button text | This value contains the text appearing on the lost password page back button. | Back |
| Lost password back URL | This value contains the URL to send the user to when the back button is selected on the lost password page. | default.asp |
| Lost password from email address | This value contains the from address for the lost password email. A valid email address must be entered in this field for the lost password email function to work properly. | |
| Lost password email subject | This value contains the subject of the lost password email. | Your account information |
| Lost password BCC email address | This value contains an optional BCC email address when lost passwords are emailed. | |

Post login settings

| Name | Description | Default Value |
|--------------------------------|---|---------------|
| Account ID is User ID | When selected, this option tells eServ that the DDMS account ID is the same as the user login ID. Selecting this option does not allow for a specific department to be accessed. To specify a department, this option must be set to false and then both a customer account ID and customer department must be entered. | true |
| DDMS customer account ID | This entry specifies a specific DDMS customer account number for the user. This value must be a valid account on your DDMS, and the Account ID is User ID option must also be set to false. Once set, all activities in eServ will use this specified account. | |
| DDMS customer department | This entry specifies a specific DDMS customer department ID for this user. This entry must be a valid department for the account specified in the DDMS Customer Account ID option, and the Account ID is User ID option must be set to false. This field can be left blank to specify the master department for the customer. All activities in eServ will use this specified department. | |
| Customer location ID | This value specifies the customer location ID. If not specified here, the location will default to the dealer primary location code setting in eServ. If you specify a location here, then do not enter zero one (01) for the location when one (1) is your primary location. | |
| Account select list name | This value specifies the list name to use if this user is allowed to select an account or department from a list. This list name must exist and have been created in list maintenance or the user will not be able to login. | |
| Can user select member account | When set, this user can select ANY member from a search screen. This function is provided for internal use only! You should never set a customer to select their own member account. Again, this setting is for internal users only! | false |
| User style sheet to apply | This value contains the user style sheet to use once the user successfully logs in. Any styles in the sheet specified here will override the default and user styles. The styles here can only be applied after the user successfully logs in. The specified style sheet must exist in your Website to apply properly. | |
| Start web page for this user | This setting controls the start page once the user successfully logs into eServ. This page must exist in your Website. | HAMenu.asp |

Login error page settings

| Name | Description | Default Value |
|---------------------------|---|---|
| Login error page heading | This value determines the login error page heading shown in the upper right part of the page. | Login Error |
| Login error page title | This value contains the heading message shown on the login error page. | There was an error logging you in! |
| Login error help message | This value is used to display help information to the user in the case of a bad login. The primary purpose is to direct the user to customer service if they need assistance. | Please contact customer service if you need assistance. |
| Login error page back URL | This value contains the 'back' URL when a bad login occurs. This URL must be valid or an error will occur. | Default.asp |

eServ main menu page settings

| Name | Description | Default Value |
|------------------------------|--|---------------------|
| Main menu page name | This value contains the main menu page name. This page must exist in your Website. | HAMenu.asp |
| Menu page header | This value contains the header text to show in the upper right part of the page. | Account Information |
| Menu page title | This value specifies the eServ main menu page title displayed in the center of the main page. | eServ Main Menu |
| Menu type to use | This value contains the menu type to use. The text only menu will work with all browsers and is the default. The Windows-style hover menu is easier to use but will only work with recent browsers. You should verify with your customer that the Windows style hover menu operates properly before changing to this menu style. | Text Only |
| Action menu item text | This value contains the text appearing on the top level action menu. | Actions |
| Logout menu item text | This value contains the text appearing on the logout menu item. | Logout |
| Logout link | This value contains the link when the user selects the logout menu item | Default.asp |
| Account menu item text | This value contains the text appearing on the top level account menu item. | Account |
| Order menu text | This value contains the text appearing on the top level order menu item | Order |
| Add items to order menu text | This value contains the text appearing on the top level add items to order menu. | Add Items |
| Favorites menu text | This value contains the top level menu item text for accessing the favorites functions. | Favorites |
| Approval menu text | This value contains the top level text appearing on the approve orders menu. | Approval |

Internal select member page settings

| Name | Description | Default Value |
|---------------------------------------|--|--|
| Member get page header | This value controls the page heading on the select member page. | Select Member |
| Member get page title | This setting controls the page title shown on the select member page. | Select Member ID |
| Member get page search prompt | This value specifies the prompt to display when asking for a member search string. | Search For: |
| Member search page search button text | This value controls the text appearing on the search button on the member search page. | Search |
| Member search page back button text | This value specifies the text to appear on the back button on the member search page. | Back to Login |
| Member search page information text | This value specifies the information text to display on the member search screen. | Enter a member ID, a member name, or part of a member name to display a list of matching records to choose from. |

Internal member list page settings

| Name | Description | Default Value |
|---------------------------------------|--|--|
| Member list page heading text | This value controls the heading text shown on the member list page. | Member List |
| Member list page title | This value controls the page title shown on the member list page. | Members Matching Your Search Criteria |
| Member list page instruction text | This value controls the instruction text appearing on the member list page. | Click a member ID link on the list to log in as that member. |
| Maximum member list records to return | This value controls the maximum number of matches to return on the member listing. Setting this value to a large number may take some time when many records match the search criteria. It is suggested to keep this number small which forces the user to more accurately define the search criteria. | 50 Records |
| Member list sort order | This value controls the member list sort order. | Member Name Order |
| Member list back button text | This value specifies the text to appear on the back button on the member list page. | New Search |

Account page options

| Name | Description | Default Value |
|--------------------------------------|--|---------------------|
| Account info menu text | This value contains the menu text to display on the account info page. | Account Info |
| Account info page submit button text | This value contains the text appearing on the account info page submit button. | Save Changes |
| Account info page reset button text | This value contains the text appearing on the account info page reset button. | Reset Entries |
| Member name prompt | This value contains the prompt for the member name. | Account Name: |
| Can user change member name | When selected, this user can change the member name. | false |
| Member email address prompt | This value contains the prompt for the member email address. | Your email address: |
| Can member change email address | When selected, this user can change the member email address. | true |
| Sold to text | This value contains the text shown above the sold to account information on the account info page. | SOLD TO |
| Ship to text | This value contains the text shown above the ship to account information on the account info page. | SHIP TO |

Catalog browse option settings

| Name | Description | Default Value |
|---|---|---------------------------------------|
| Can user access catalog browse | This option controls if the user can access the catalog browse function. | true |
| Catalog browse menu text | This value contains the text appearing on the eServ menu to access the catalog browse function. | Browse Catalog |
| Catalog browse page name | This value contains the page name to display when the user chooses the catalog browse function. This page must exist in your Website. | HACatalog.asp |
| Catalog browse page header | This value contains the text shown in the upper right of the catalog browse page. | Browse Catalog |
| Catalog browse page title | This value contains the text appearing at the top center of the catalog browse page. | Browse Our Catalog |
| Catalog browse page submit button text | This value contains the text appearing on the submit button on the catalog browse page. | Submit |
| Catalog browse page reset button text | This value contains the text appearing on the reset button on the catalog browse page. | Reset |
| Show the search by item number | This value controls if the search by item number option is shown to the user on the catalog browse page. | true |
| Search by item number text | This value contains the text appearing above the search by item number box on the catalog browse page. | SEARCH BY ITEM NUMBER |
| Search by keyword | This value controls if the search by keyword option is shown to the user on the catalog browse page. | true |
| Search by keyword text | This value contains the text appearing above the search by keyword box on the catalog browse page. | SEARCH BY DESCRIPTION OR MANUFACTURER |
| Maximum items to display on a page | This value controls the maximum number of matching items to display on the catalog browse page. | 5 |
| Show pop-up link on browse catalog page | When selected, this option will show a link to the item pop-up detail page on the browse catalog screen. | false |

Contact us page settings

| Name | Description | Default Value |
|--------------------------------|--|---------------------|
| Can user access contact page | When selected, the user can access the contact us page. | false |
| Contact us menu text | This value controls the menu text for accessing the contact us page. | Contact Us |
| Contact us page name | This value contains the page name to display when the user selects contact us. This page must exist in your Website. | HAContact.asp |
| Contact page header | This value contains the text shown in the upper right portion of the contact us page. | Contact Us |
| Contact us page title | This value contains the contact us page title. | Contact Us |
| Send contact to email address | This value contains the email address contact requests should be sent to. This entry must be a valid email address to receive the contact request. | |
| Contact page message 1 | This value contains general contact information such as phone, fax, etc. on the contact us page. | |
| Contact page message 2 | This value contains general contact information such as phone, fax, etc. on the contact us page. | |
| Contact page message 3 | This value contains general contact information such as phone, fax, etc. on the contact us page. | |
| Contact from name prompt | This value contains the prompt for the user to enter their name. | Your Name: |
| Contact from email address | This value contains the prompt for the user to enter their email address. | Your Email Address: |
| Contact subject text | This value contains the text requesting the subject of the contact. | Regarding: |
| Contact message prompt | This value contains the prompt for the comments/text of the contact message. | Your Message: |
| Contact page reset button text | This value contains the text appearing on the reset form button on the contact us page. | Reset Entries |
| Contact submit button text | This value contains the text appearing on the submit button on the contact us page. | Submit My Request |

Option page settings

| Name | Description | Default Value |
|-----------------------------|---|----------------|
| Can user access option page | This value controls user access to the option change page. | true |
| Option menu text | This value contains the text appearing on the main menu for changing the user options on the option change page. | Options |
| Option change page name | This value contains the page name to display when the user selects to change options. This page must exist in your Website. | HAOptions.asp |
| Option page header | This value contains the header text shown on the upper right portion of the option change page. | Options |
| Option page title | This value contains the change option page title. | Change Options |
| Option page reset button | This value contains the reset button text on the option change page. | Reset Entries |
| Option page submit button | This value contains the text appearing on the submit button on the option change page. | Save Changes |

Options for password changes

| Name | Description | Default Value |
|---------------------------------|---|-----------------|
| Can user access password change | When selected, the user can access the password change function if their account is also enabled to change the password. If the account is not enabled to change the password, this setting is ignored. | true |
| Password change menu text | This value contains the menu text for accessing the change password function. | Change Password |
| Change password page name | This value contains the page name to display when the user requests a password change. This page must exist in your Website. | HAPassw.asp |
| Password page header | This value contains the page header shown in the upper right portion of the password change page. | Change Password |
| Password change page title | This value contains the page title for the password change page. | Change Password |
| Password change reset button | This value contains the text for the reset button on the password change page. | Reset Entries |
| Password change submit button | This value contains the submit button text on the password change page. | Change Password |

Options for handling substitute items

| Name | Description | Default Value |
|------------------------------------|---|----------------|
| Sub codes to ask user | This value contains a list of substitute codes that you want to display as choices. All sub codes entered here will be shown as an alternate choice when the original item has one of these substitute item codes. Enter the codes one at a time, with no spaces. Example: SG | S |
| Sub codes to automatically accept | This value contains a listing of the substitute item codes that you want to automatically accept without offering a choice. Any items with substitute codes listed here will be automatically replaced with their substitute before being displayed. Enter the substitute codes you want to automatically process, one at a time, without spaces. Example: DR | DR |
| Substitute item header | This value contains the heading shown above the substitute item shown to the user. | ALTERNATE ITEM |
| Substitute item number header text | This value contains the text appearing above the substitute item number. | ALTERNATE |
| Requested item header text | This value contains the text appearing above the requested item when a substitute item is also displayed. | REQUESTED ITEM |

Item lookup and display options

| Name | Description | Default Value |
|-------------------------------------|--|---------------------------------|
| Use customer alias | This value determines if the customer alias should be used when searching for item numbers. If used, the customer alias file is searched first. If matching items are found in the customer alias, then the result list is limited only to those items contained in the customer alias file. If the item entered is not matched in the customer alias file, then, and only then, the item master file is searched for matches. | false |
| Matching item list sort sequence | This value determines the sort sequence of the matching item list when searching for item numbers. | Not Sorted |
| Keyword matching list sort sequence | This value determines the sort sequence of the matching item list when searching for items by keyword. | Not Sorted |
| Keyword and matching | This value determines if the keyword search uses AND matching. And matching means that ALL the key words must be matched before the item will be displayed. Setting this value to false uses OR matching. Or matching means that ANY of the entered keywords will match and display the item. If set to true, then "Red Pen" will NOT match "Red Binder". If set to false, then "Red Pen" WILL match "Red Binder". | true |
| Keyword exact matching | This value determines if the keyword search will use an exact match. When set to true, "Pen" will not match "Pens". If set to false, matches will occur anywhere and "Pen" will match "Pens", "Pencil", etc. | true |
| Initialize keyword engine on start | When selected, this option will initialize the keyword search engine when eServ starts for the first time. Note, initializing the keyword search engine will cause eServ to pause while the engine is initialized upon first use. | false |
| Keyword no match text | This value contains the text appearing when no matches for the user keyword search are found. | No items matched your keywords! |
| Item number no match text | This value contains the text appearing when no matching items are found for the user item number search. | No items matched your entry |
| Item number text | This value contains the text appearing above the item number. | ITEM NUMBER |
| Item description text | This value contains the text appearing above the short item description. | DESCRIPTION |
| Show item selling price | This value controls if the item selling price is shown. | true |
| Item selling price text | This value contains the text appearing above the item selling price. | YOUR PRICE |
| Item unit of measure text | This value contains the text appearing above the item unit of measure. | UM |
| Show the item price type code | This value controls if the item price type code is shown to the user. The price type code is "S" for standard discount, "C" for contract, etc. See the DDMS documentation for a complete list of these codes. | false |
| Item price type text | This value contains the text appearing above the item price type code. | T |
| Show the item contract ID | This value determines if the contract ID used to price the item is shown to the user. | false |
| Item contract text | This value contains the text appearing above the contract used to determine the sell price. | ID |
| Show item list price | This value controls if the list price is shown to the user. | true |
| Item list price text | This value contains the text appearing above the list price. | LIST PRICE |
| Show item discount percent | This value controls if the discount percent is shown to the user. | true |
| Minimum discount amount to show | This value contains the minimum discount percent that will be shown to the user. | 0 |
| Item discount percent text | This value contains the text to display over the discount percent. | DISCOUNT |

Item lookup and display options

| Name | Description | Default Value |
|--|---|-------------------|
| Show the item quantity break pricing section | This value determines if the item quantity break pricing section is shown to the user. | false |
| Item quantity break header text | This value contains the heading text shown above the item quantity break section. | BUY MORE AND SAVE |
| Show the item inventory section | This value controls if the item inventory information section is displayed to the user. You must set this value to true before any of the item inventory items can be displayed. | false |
| Show the item on hand quantity | This value controls if the item on hand quantity is shown to the user. | true |
| On hand display text | This value contains the text shown above the on hand quantity. | ON HAND |
| Show the item allocated quantity | This value controls if the item allocated quantity is shown to the user. | true |
| Allocated quantity text | This value contains the text shown above the item allocated quantity. | ALLOCATED |
| Show the item backorder quantity | This value controls if the item backorder quantity is shown to the user. This is the quantity you have on backorder with your supplier, not the customer backorder quantity. | true |
| Item backorder quantity text | This value contains the text appearing above the item backorder quantity. | ON BACKORDER |
| Show the item on order quantity | This value controls if the quantity you have on order with your suppliers is shown to the user. | true |
| Item on order text | This value contains the text shown above the item on order quantity. | ON ORDER |
| Show the item due date | This value controls if the item due date from your supplier is shown to the user. | true |
| Item due date text | This value contains the text appearing above the item due date. | DUE DATE |
| Show the standard eContent section | This value controls if the standard eContent section is shown to the user. The eContent is provided by your wholesaler and contains the images, long consumer descriptions, and other fields. You must set this value to true before ANY of the standard eContent fields can be displayed. | false |
| Show the item image file | This value controls if the thumbnail (small) image is displayed to the user. | true |
| Item image text | This value contains the text shown over the item image. | IMAGE |
| Show the item manufacture name | This value controls if the manufacturer name is shown to the user. | true |
| Item manufacturer text | This value contains the text shown next to the item manufacturer name. | MANUFACTURER: |
| Show item long description | This value controls if the long consumer description is shown. | true |
| Long consumer description text | This value contains the text shown next to the consumer description. | DESCRIPTION: |
| Show the catalog sales copy | This value controls if the long catalog sales copy is shown to the user. | true |
| Sales copy text | This value contains the text shown next to the item sales copy. | SALES COPY: |
| Show the extended eContent section | This value controls if the extended eContent section is shown to the user. The extended eContent section consists of flags that specify if the item can be shipped by UPS, the weight, and many other item fields. You must set this value to true before ANY of the extended eContent fields can be displayed. | true |
| Show the item catalog page | This value controls if the catalog page for the item is displayed. | true |
| Catalog page text | This value contains the text shown above the catalog page number. | CATALOG PAGE |

Item lookup and display options

| Name | Description | Default Value |
|--------------------------------------|---|--|
| Show item box packing quantity | This value controls if the item box pack quantity is shown to the user. | true |
| Item box pack text | This value contains the text appearing above the item box pack quantity. | BOX PACK |
| Show the item carton packaging | This value controls if the item carton package quantity is shown to the user. | true |
| Item carton pack text | This value contains the text appearing above the item carton package quantity. | CARTON PACK |
| Show the UPS indicator | This value controls if the UPS indicator is shown to the user. | true |
| Item UPS indicator text | This value contains the text appearing above the UPS indicator. | SHIP UPS |
| Show the item weight | This value controls if the item weight is shown to the user. | true |
| Item weight text | This value contains the text shown above the item weight. | SHIP WEIGHT |
| Show item recycled indicator | This value controls if the recycled indicator is shown to the user. | true |
| Recycled item text | This value contains the text appearing above the recycled item indicator. | RECYCLED |
| Show minority manufacturer indicator | This value controls if the minority manufacturer indicator is shown to the user. | true |
| Minority manufacturer text | This value contains the text shown above the minority manufacturer indicator. | MINORITY MFG |
| Show the item country of origin | This value controls if the item country of origin indicator is shown. | true |
| Item country of origin text | This value contains the text appearing above the item country of origin. | COUNTRY ORIGIN |
| Show the item companion indicator | This value controls if the companion indicator is shown. | true |
| Companion item text | This value contains the text appearing above the companion item indicator. | COMPANION ITEMS |
| Show the substitute item indicator | This value controls if the substitute item indicator is shown to the user. | true |
| Item substitute indicator text | This value contains the text appearing above the substitute item indicator. | SUBSTITUTE ITEMS |
| Show the consumable item indicator | This value controls if the consumable item indicator is shown to the user. | true |
| Consumable item indicator text | This value contains the text appearing above the consumable item indicator. | CONSUMABLE ITEM |
| Item order quantity text | This value controls the text appearing next to the order quantity input box. | Order Quantity: |
| Show item level comments on order | When selected, this option displays the item level comments box when placing an order for the item. | true |
| Item comment box text | This value contains the text appearing next to the item comments input box. | Comments: |
| Show item minimum order quantity | This value controls if the minimum order quantity indicator is shown to the user. | true |
| Item minimum quantity text | This value contains the text message appearing for a minimum quantity. The minimum quantity and the unit of measure for the item is added to the end of this message. | You must order this item in multiples of |

Item pop-up display options

| Name | Description | Default Value |
|--|---|--------------------------------------|
| Item number no match text | This value contains the text appearing when no matching items are found for the item number. | Details for this item not available! |
| Item number text | This value contains the text appearing above the item number. | ITEM NUMBER |
| Item description text | This value contains the text appearing above the short item description. | DESCRIPTION |
| Show item selling price | This value controls if the item selling price is shown. | true |
